COURSEWORK

Module	Programming Fundamentals
Assignment Title	Bill Printing System I
Assignment Type	Practical Exercise

Bill Printing System

This is a very simple application to calculate bill total. When run this program, prompt the window to get user input(Figure 1). The first input is customer phone number. Phone number is a String value. The second input is customer name. Customer phone number and name both are String variables.

Figure 1 – 'Welcome iMart' Header

After getting customer details, the program should get the number of items by the user(Figure 2). All quantity values are int variable. There are 7 items in this shop. All items are listed below with prices. Item prices are double variable.

Basmathi	Rs.250.00
Dhal	Rs.180.00
Sugar	Rs.150.00
Higland	Rs.1200.00
Yoghurt	Rs.50.00
Flour	Rs.120.00
Soap	Rs.160.00

```
C:\Windows\System32\cmd.exe

D:\billPrint>java BillPrint

=====
Welcome to Mait
=====

Enter Customer Phone Number - 0703859855
Enter Customer Name          - Kasun

=====

Basmathi Qty(Kg) - 10
Dhal Qty(Kg)      - 2
Sugar Qty(Kg)     - 3
Higland Qty       - 1
Yoghurt Qty       - 6
Flour Qty(Kg)     - 1
Soap Qty          - 5
```

Figure 2 - Getting the quantity to generate the bill

When the user input all item quantity, the system should calculate the total value of the item by item and the total bill value. After calculating the total bill value add a 10% discount to the total bill value and should print the final bill value and display the bill as given below(Figure 3).

 225, Galle Road, Panadura.			
# Tel : 0703859855 # Name : Kasun			
	Qty	unit price	Price
# Basmathi	10	250.0	2500.0
# Dhal	2	180.0	360.0
# Suger	3	150.0	450.0
# Highland	1	1200.0	1200.0
# Yoghurt	6	50.0	300.0
# flour	1	120.0	120.0
# Soap	5	160.0	800.0
		Total	5730.0
		discount(10%)	573.0
		Price	5157.0

Guidelines

1. Demo Video Reference

- Click this link to refer demo video - [DemoVideo](#)
- The demo is provided to help you better understand the task requirements and clarify any doubts you may have.

2. Programming Requirements

- Use the Scanner class to obtain input from the command-line interface.
- Ensure your program runs correctly and reflects your individual understanding.

3. Submission Instructions

- Follow the instructions provided in the LMS.
- Submit your Java code without changing the file name on or before the coursework deadline.

4. Academic Integrity Policy

- This task must be completed individually.
- Do not use AI tools, code generators, or copy answers from any external sources or other students.
- Submissions must represent your original work and effort.

5. Support

- If you require any clarification, please feel free to contact your instructor before the deadline.
